

CO2 - ASSESSMENT TOOL - 3

Name: S. Deepakhan

Reg No: 192672046

Course Code: ITA1408

Course Name: Ethical
Hacking.

1) Introduction:

Footprinting is the process of collecting information about a target organization from publicly available sources. Passive footprinting does not directly communicate with the target's systems, making it safe and difficult to detect. It helps security professionals understand an organization's online presence and identify possible security risks.

1. WHOIS - Domain Registration Details

Purpose:

WHOIS is used to obtain domain registration information.

Information obtained:

- * Domain name
- * Registrar name
- * Registration and expiry dates
- * Name Servers.

How it helps:

- * Identifies the domain owner.
- * Shows domain registration details.
- * Helps understand the organization's DNS infrastructure.
- * Useful for competitive intelligence.

2. TheHarvester - Employer Email Addresses

Purpose:

TheHarvester collects publicly available email addresses and host information.

Information Obtained:

- * Employee email addresses
- * Hostnames
- * Public IP addresses

How it helps:

- * Identifies employee email patterns
- * Reveals important contacts.
- * Helps understand the organizational structure.
- * Supports security assessments.

3. Wappalizer - Technology Stack

Purpose:

Wappalizer identifies the technologies used by a website.

Information Obtained:

- * Web Server
- * CMS
- * Programming language.
- * Frameworks
- * Analytics tools

How it helps:

- * Identifies software used by the company.
- * Detects outdated technologies
- * Helps understand the IT infrastructure.
- * Assists in security planning.

4) Sublist3r - Publicly Exposed Subdomains.

Purpose:

Sublist3r discovers publicly available subdomains.

Information obtained:

- * Mail Server
- * VPN Server
- * Development Server
- * Support portal

How it helps:

- * Finds publicly accessible services
- * Identifies additional web applications
- * Reveals network structure
- * Helps in reconnaissance
